| 35                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Corporate Environmental Responsibility | A separate Environmental Cell equipped with full-fledged laboratory facilities shall be set up to carry out the Environmental Management and Monitoring functions, with qualified personnel shall be set up under the control of senior Executive, who will directly to the head of the organization. |
| <b>PPs Submission:</b> Complied<br>As the project is of short duration and considering the mobile nature of the drilling rig, establishment of a full-fledged in-house environmental laboratory at site is not feasible. However, to ensure compliance with environmental management and monitoring requirements, the Company has engaged a third-party accredited agency to carry out environmental monitoring on a quarterly basis. No operation during 01.04.2025 to 30.09.2025. |                                        | Date:<br>21/11/2025                                                                                                                                                                                                                                                                                   |
| 36                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Corporate Environmental Responsibility | Self-environmental audit shall be conducted annually. Every three years third party environmental audit shall be carried out.                                                                                                                                                                         |

Prior permission shall be obtained from the concerned regulatory authority.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>PPs Submission:</b> Complied<br>The fresh water requirement is restricted to 25 m3/day in the current drilling activity. It is supplied by local tankers.                                                                                                                                                                                                                                                                                                                           |                                           | Date:<br>26/11/2025                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | WATER QUALITY MONITORING AND PRESERVATION | The project proponent will treat and reuse the treated water within the factory and no waste or treated water shall be discharged outside the premises. Mobile ETP coupled with RO shall be installed to reuse the treated water in drilling system. Size of the waste shall be equal to the total volume plus volume of drill cutting and volume of discarded mud if any. Two feet free board may be left to accommodate rainwater. There shall be separate storm water channel and rainwater shall not be allowed to mix with wastewater. Alternatively, if possible, pit less drilling be practiced instead of above. Produced water generated shall be treated with in the premises as per the Standards for Liquid Effluent of Oil Drilling and Gas Extraction Industry notified in The Environment (Protection) Rules 1986 and shall not be discharged untreated anywhere or in any stream |
| <b>PPs Submission:</b> Complied<br>Mobile ETP of capacity 30 KLD is installed at site during drilling operation phase and no waste or treated water is discharged outside the premises. Free board of 2 feet is provided to accommodate rain water which is separated from wastewater channel. Produced water is treated inside the premises as per the Standards for Liquid Effluent of Oil Drilling and Gas Extraction Industry notified in The Environment (Protection) Rules 1986. |                                           | Date:<br>26/11/2025                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 31                                                                                                                                                                                                                                                                                                                          | AIR QUALITY MONITORING AND PRESERVATION   | The fugitive emission in the work zone environment is monitored. The emission shall conform to the standards prescribed by the concerned authorities from time (e.g. Director of Industrial Safety and Health). Following indicative guidelines shall also be followed to reduce fugitive emissions. (a) The internal road shall be either concreted or asphalted or paved to reduce fugitive emission during vehicular movement. (b) Air Borne dust shall be controlled with water sprinklers at suitable locations in the plant. EC Identification No. - EC22B002UP187842 File No. - 6895 Date of Issue EC - 12/05/2022 Page 5 of 14 |
| <b>PPs Submission:</b> Being Complied<br>Fugitive emission in the work zone environment is monitored regularly. Internal roads have been properly compacted to minimize dust generation during vehicular movement.                                                                                                          |                                           | Date:<br>23/12/2025                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 32                                                                                                                                                                                                                                                                                                                          | AIR QUALITY MONITORING AND PRESERVATION   | Regular monitoring of the ground-level concentration of PM10, PM2.5, SO2, NOx shall be carried out in the impact zone and its records shall be maintained. Ambient air quality levels shall not exceed the standards stipulated by the UPPCB. If at any stage these levels are found to exceed the prescribed limits, necessary additional control measures shall be taken immediately. The location of the stations and frequency of monitoring shall be decided in consultation with the UPPCB.                                                                                                                                      |

| 5                                                                                                                                                                                                                                                                                                                                                                   | WATER QUALITY MONITORING AND PRESERVATION | The project proponent will treat and reuse the treated water within the factory and no waste or treated water shall be discharged outside the premises. Mobile ETP coupled with RO shall be installed to reuse the treated water in the drilling system. Size of the waste shall be equal to the hole volume plus volume of drill cutting and volume of discarded mud if any. Two feet free board may be left to accommodate rainwater. There shall be a separate stormwater channel and rainwater shall not be allowed to mix with wastewater. Alternatively, if possible pit less drilling be practiced instead of the above. |
